

SINGLE & MULTI-SIZE MUNI-BALL® PLUGS

Superior to mechanical plugs, Muni-Ball® plugs **WORK IN ALL TYPES OF PIPE**- sealing the roughest surfaces. Made of **NATURAL RUBBER**, these plugs are durable and corrosion resistant. Muni-Ball plugs have a threaded **ALUMINUM BY-PASS**. They allow sewer flow to pass through the plug via a pump hose in addition to simply blocking flow.

The design of Multi-Size Muni-Ball plugs allows one size to fit several pipe diameters.

Muni-Ball plugs come equipped with an eyebolt for tethering, raising, and lowering while using a poly-lift line. They also come with a **REMOVABLE TIRE INFLATION VALVE***, allowing them to be repaired or replaced with quick disconnect fittings.

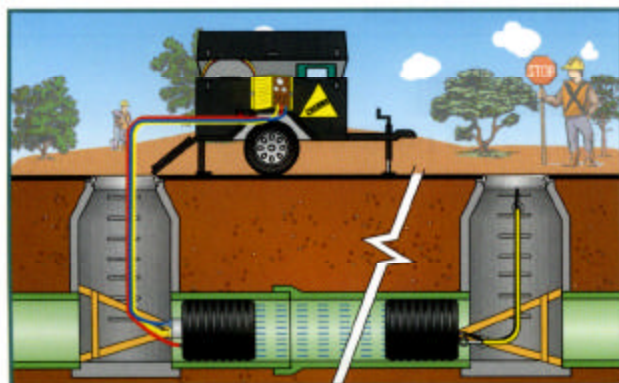

CONVERSION KITS ARE AVAILABLE to equip these plugs for sewer air testing. An accessory kit also allows conversion of these plugs to be used as a REMO® remote placement plug.

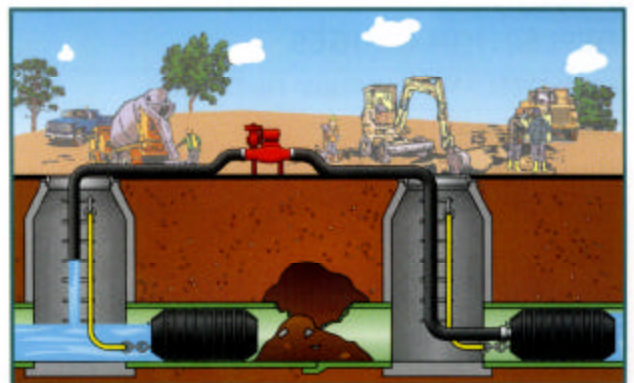

Conversion Kit - Muni-Ball® to Remo® Plug

* 1½" through 4" Muni-Ball® plugs have an inflation valve that is molded and not removable. These smaller Muni-Ball plugs come with an attached chain and ring handle. The handle may be used to carry the plug or act as an anchor to **PREVENT PLUG FROM SLIDING DOWN A LINE**.
